
Plan for Developing a Certification Scheme for Sustainable Peatland Management (SPM)

Hanna Nikinmaa

Forest and Environmental Consultant

INDUFOR

10 June 2008

Table of content

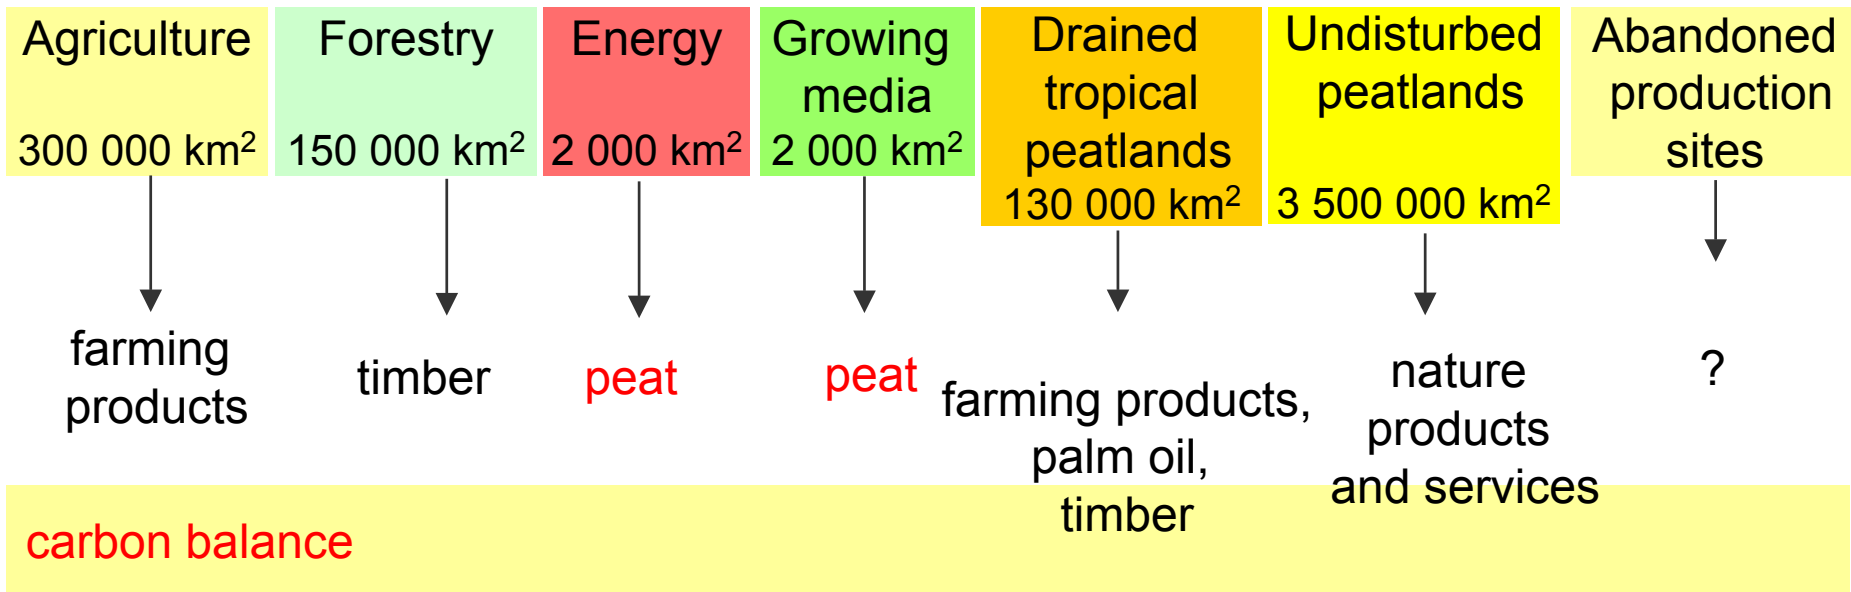

1. Targets for certification
2. Management regimes for peatlands
3. Issues to be settled prior to scheme development
4. Elements of a certification scheme
5. Underlying assumptions
6. Proposed SPM scheme development plan
 1. Global strategy
 2. Scheme administration
 3. Standard setting
 4. Chain of custody
 5. Certification and accreditation
7. Summary and budgets
8. Lessons learned

1. General targets for certification of peatland management

1. **Promote** globally the **best management** practices
2. Strive for more harmonized peatland management globally (quality)
3. Increase awareness of the good management practices
4. Improve the **image** of peat at environmentally sensitive **markets**
5. **Recognize sustainably produced peat** from other peat products at the markets
6. Provide a certification **system for carbon balance verification**

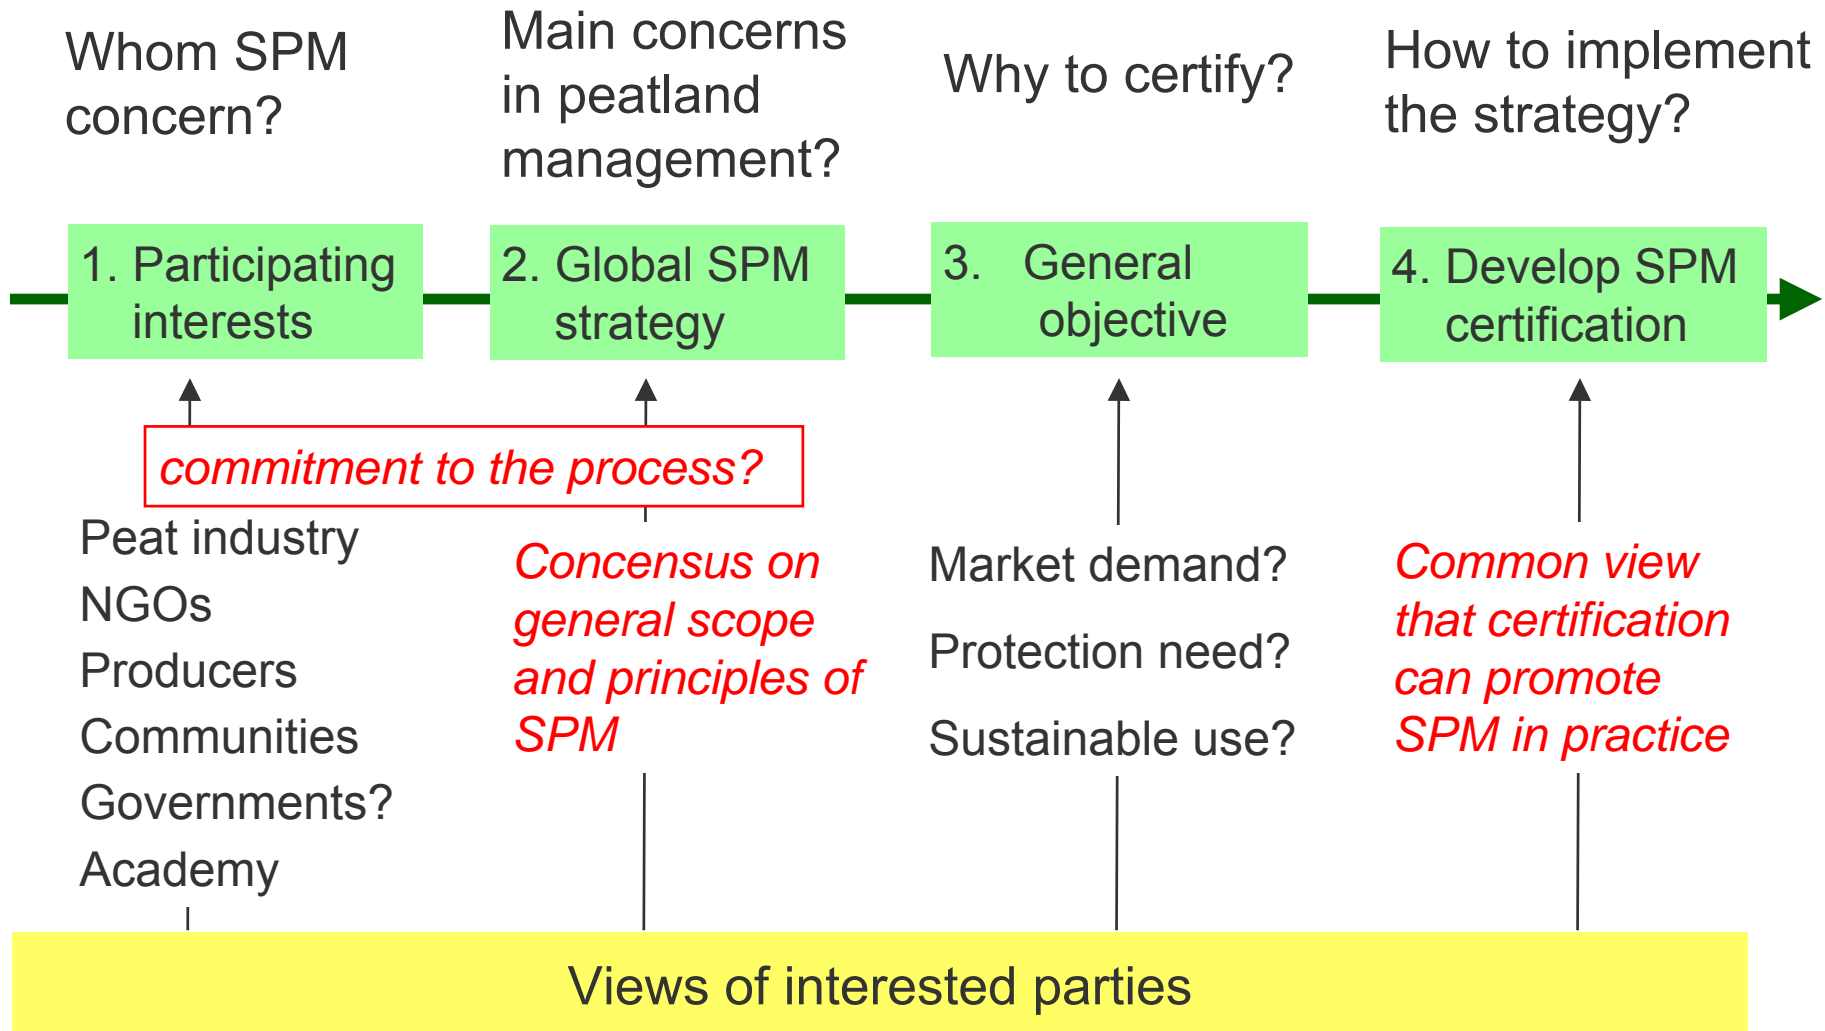

Producer has the responsibility to demonstrate the use of sustainable production methods!

2. Management regimes for peatlands

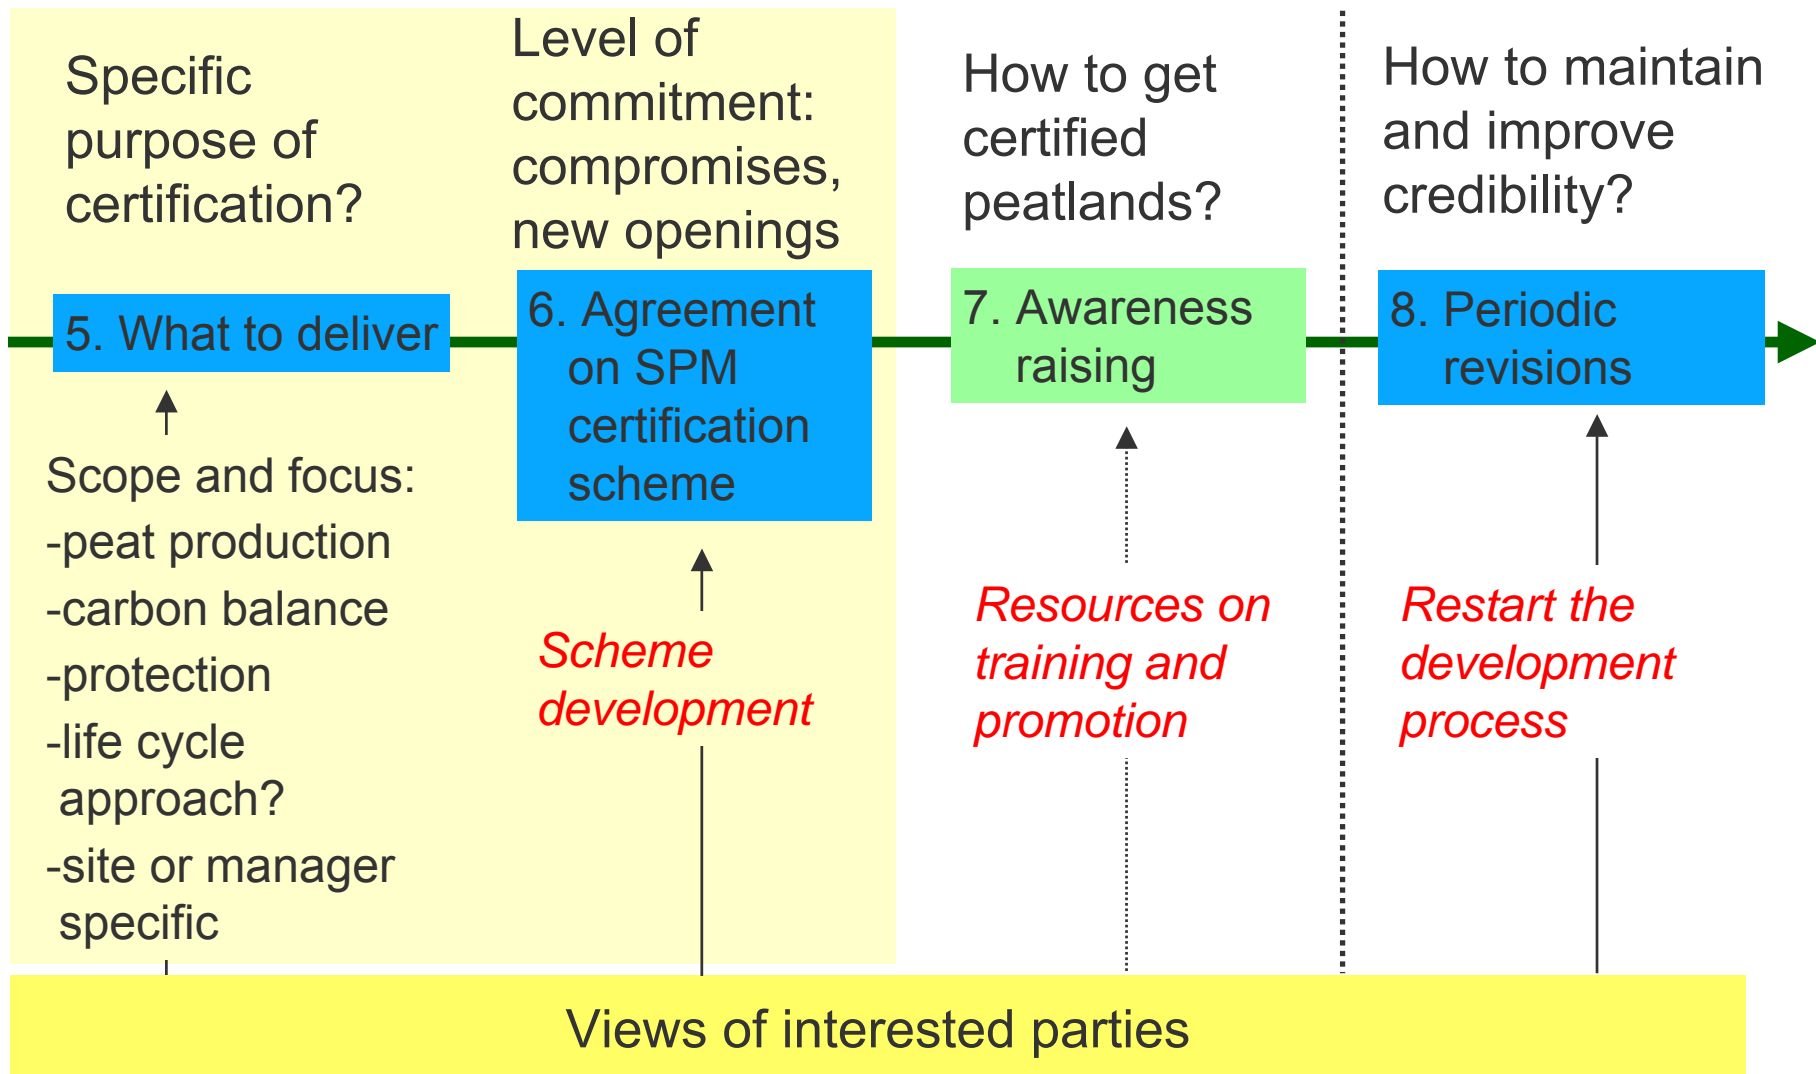

Data: IPS 2008, Silvius & Diemont 2007, Joosten & Clarke 2002

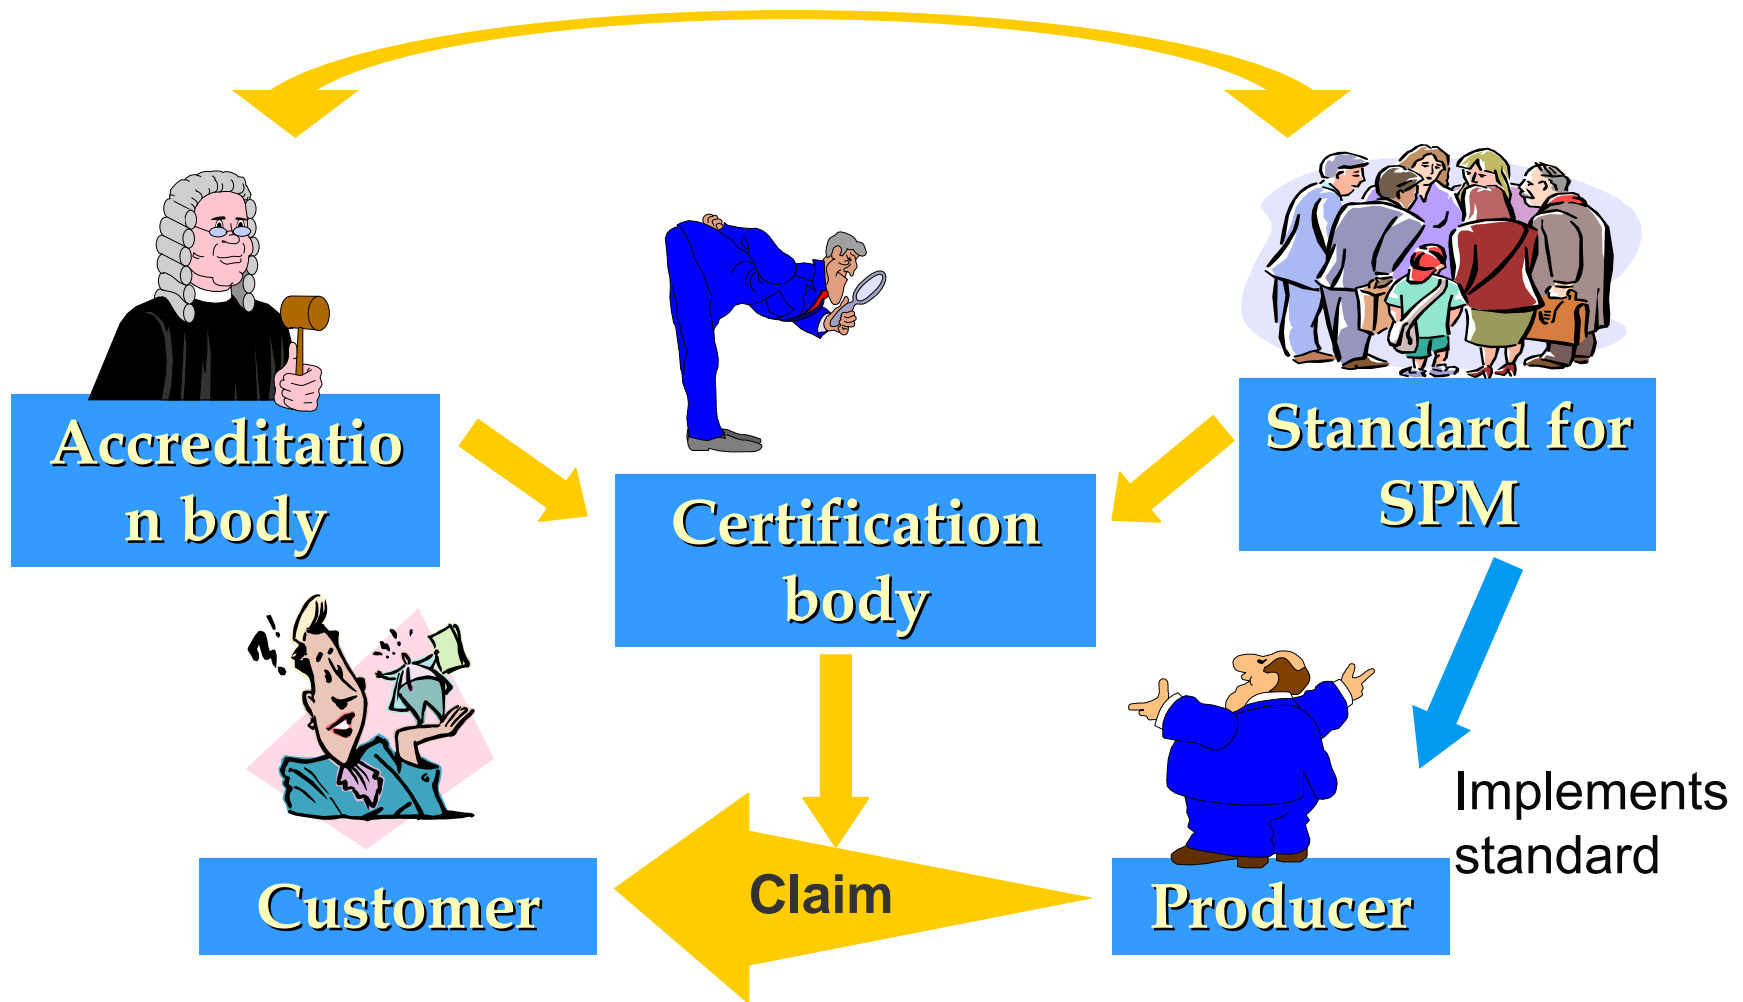

3. Key issues to be addressed prior to scheme development ...(1/2)

3. Key issues to be addressed prior to scheme development ...(2/2)

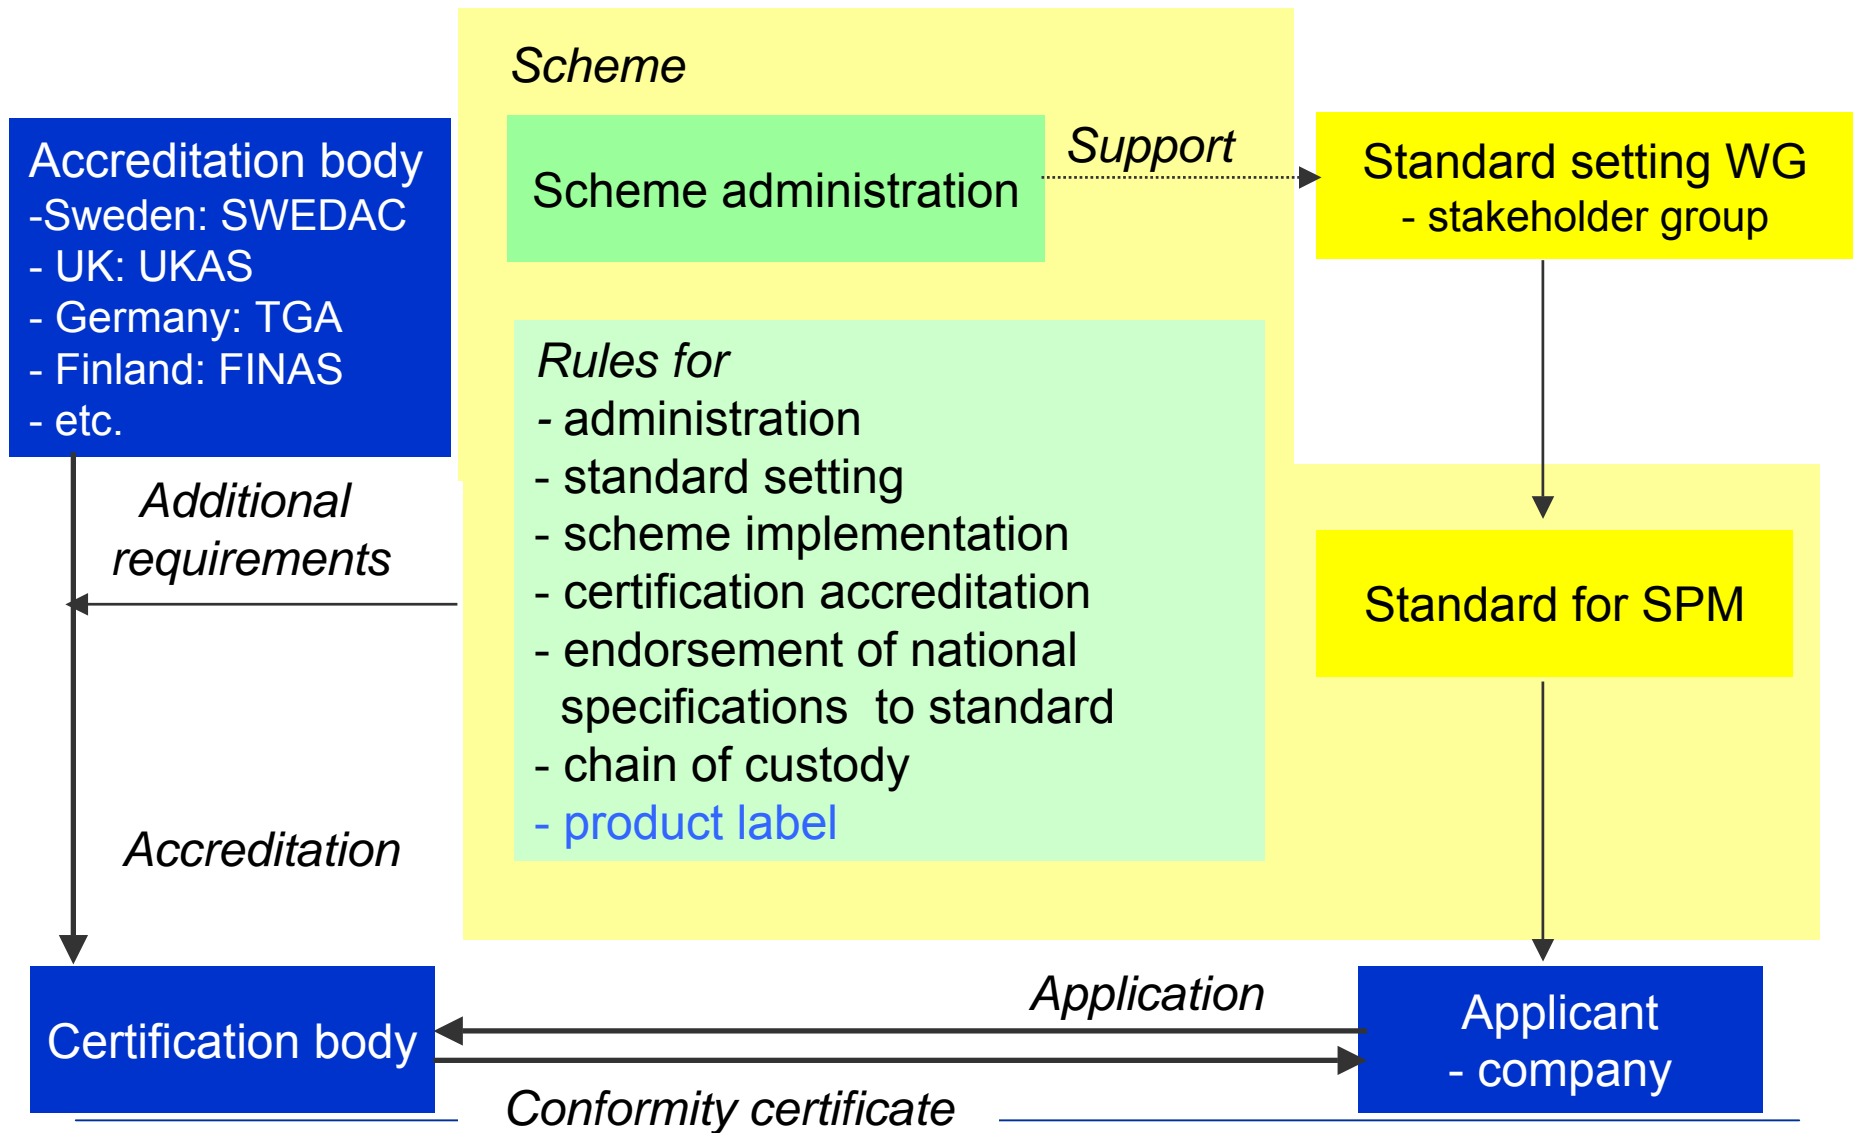

4. Elements in a certification scheme

Source: GTZ

4. Elements of a certification scheme

5. Underlying assumptions (1/2)

The future scheme should be:

1. Global

- global requirements but potentially national specifications will be allowed

2. Broad in scope covering Sustainable Peatland Management (SPM)

- peatlands managed for peat production, protection and other functions
- including provisions for carbon balance assessment
- management for agriculture or forestry is not considered (certification exists) – carbon balance verification potentially applicable

3. Accessible to different types of peat producers

- from large industry to small scale producers in any climate zone

*Assumptions may
be questioned during the
scheme development*

5. Underlying assumptions (2/2)

4. Credible and **internationally recognized**

- relies on established certification procedures, competent certification and accreditation bodies

5. **Supported** and partly resourced **by IPS**

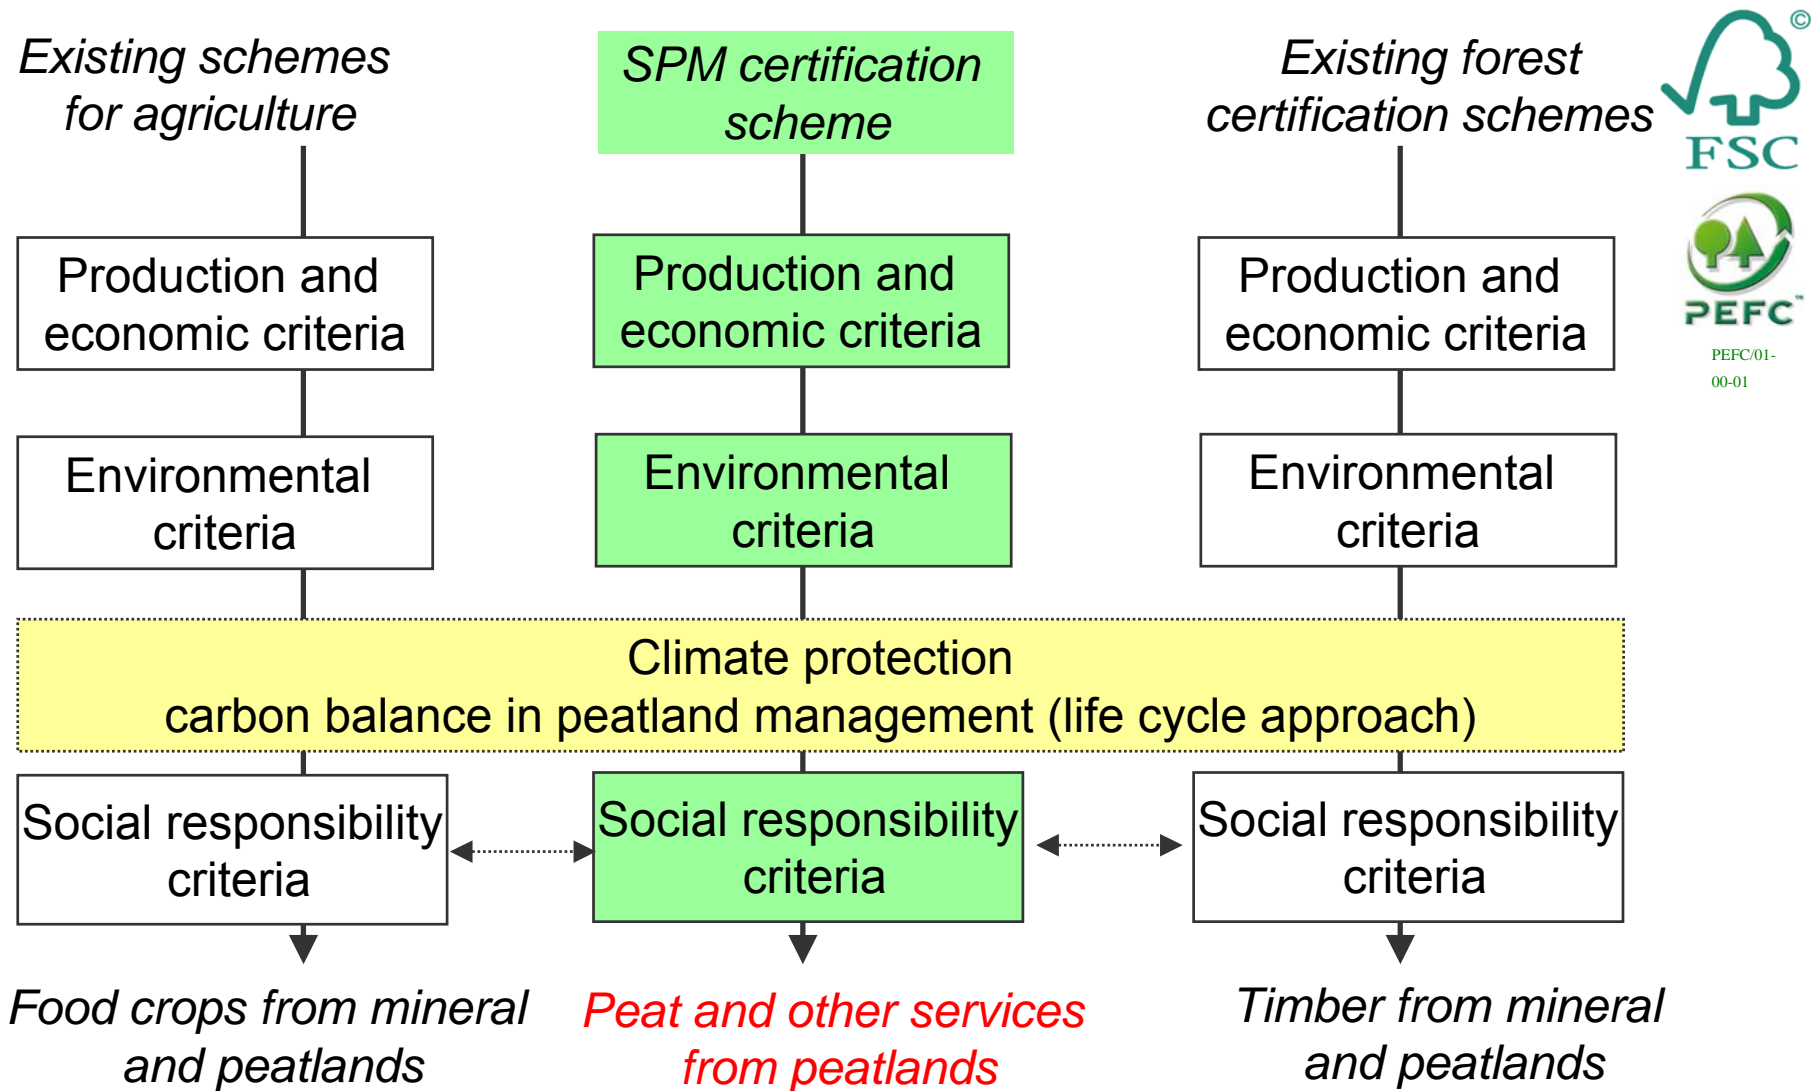

- independent position under the IPS

6. Including an **option** to develop a SPM product **label**

- owned and governed by the SPM scheme

7. Certifies individual peatlands (**production sites**)

5. Relation between existing and SPM certification schemes

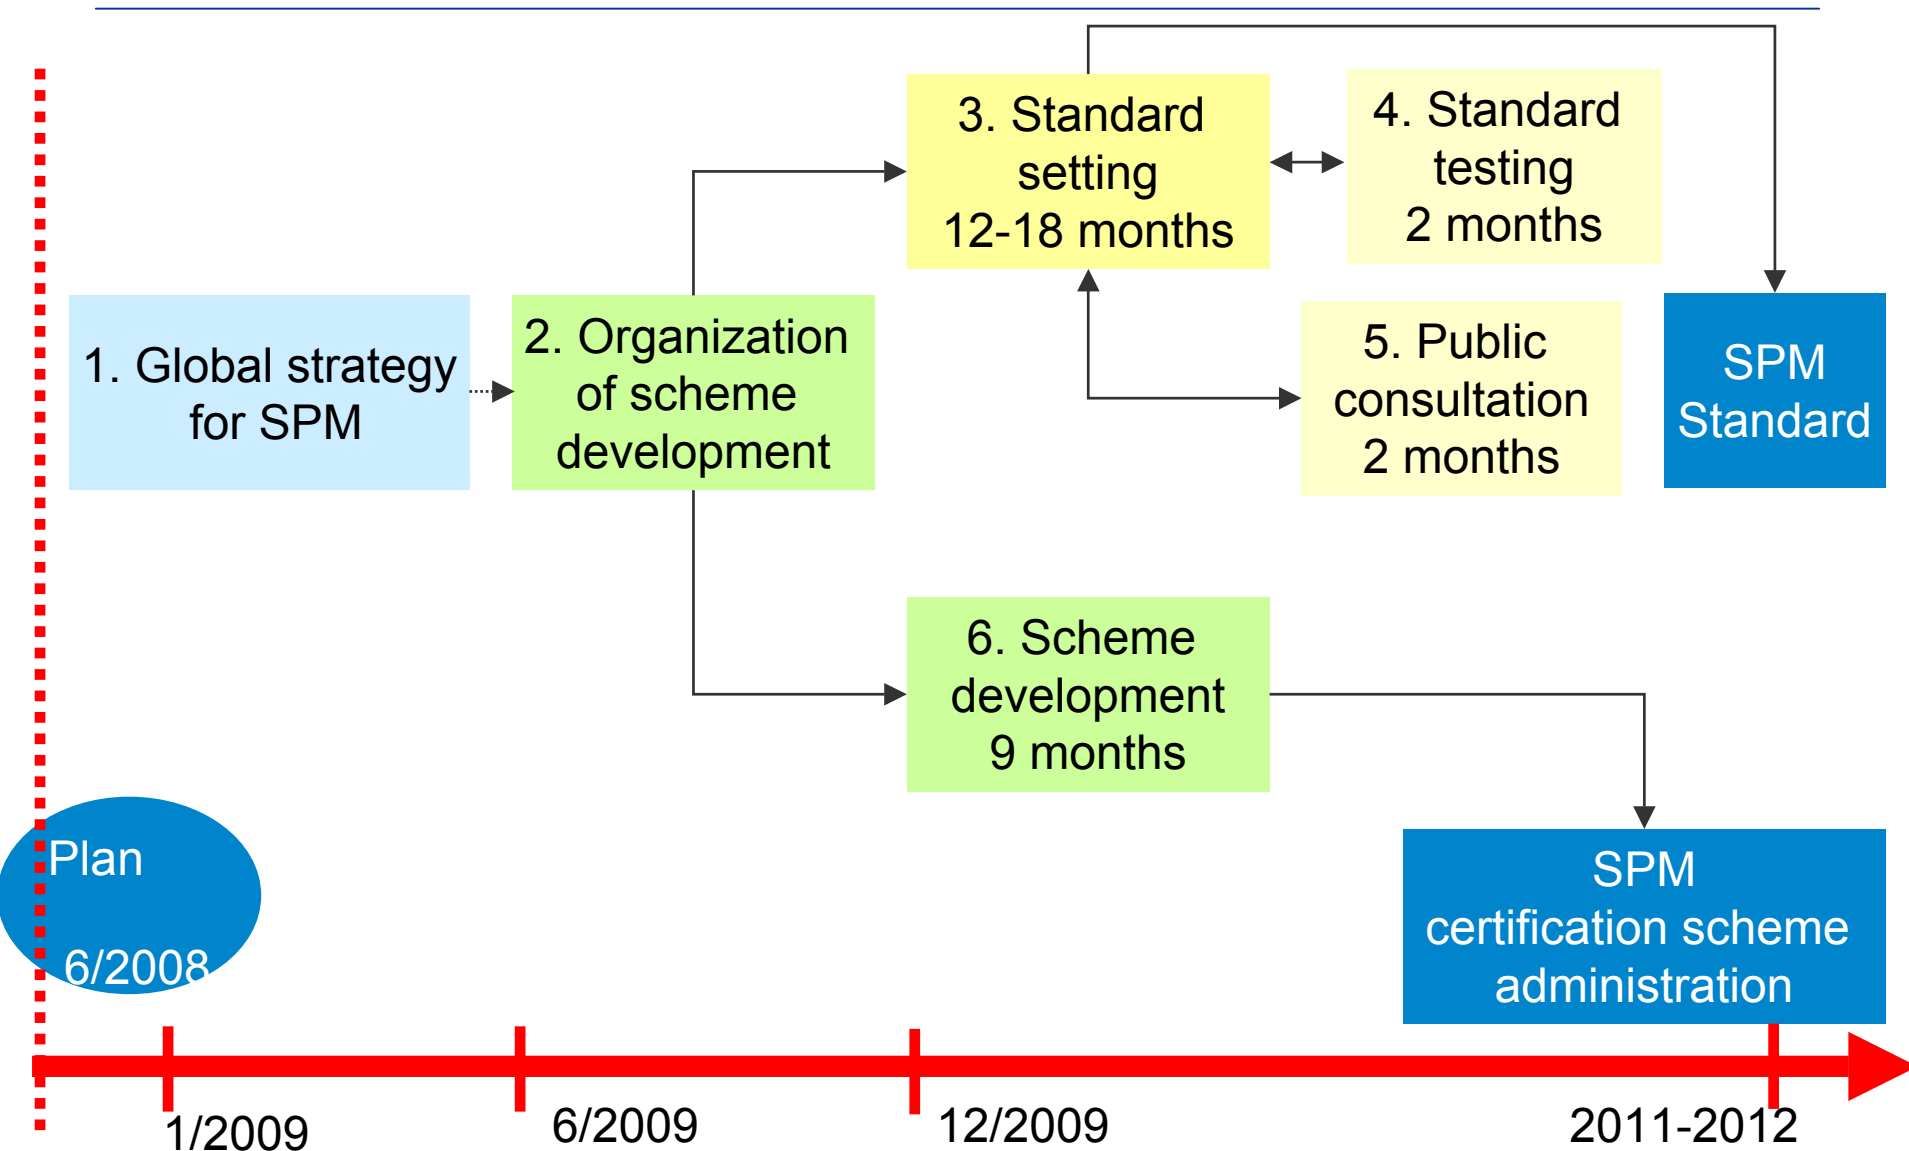

6. Proposed SPM Scheme Development plan

Schedule

- 1. Global strategy for sustainable peatland management**
- 2. Scheme administration - proposal for an administrative structure**
- 3. Standard setting**
- 4. Chain of custody verification**
- 5. Certification and accreditation arrangements**

6. Development of SPM certification scheme*

6. Proposed SPM Scheme Development plan

Schedule

- 1. Global strategy for sustainable peatland management**
- 2. Scheme administration - proposal for an administrative structure**
- 3. Standard setting**
- 4. Chain of custody verification**
- 5. Certification and accreditation arrangements**

6.1. Global strategy for SPM

■ Purpose

- Express the stakeholders' view on strategic framework for sustainable use and protection of peatlands
- Provide a **common basis for standard development**
- **Interprets** international **conventions and IPS codes of conduct** on Wise Use of Peatlands into strategic principles
- General strategy reflects the values of all interested parties

■ Working method

- Open participatory process initiated by IPS
- Participating parties define development procedures and elect a chair
- IPS provides a coordinator and secretarial services
- Chair and coordinator prepare the scheduled stakeholder meetings (3-4)

6.1. Global strategy for SPM - responsibilities

- Chair – leads strategy development
 - IPS member or other trusted person, elected by the stakeholders
- IPS
 - supplies a coordinator (later called certification manager) and secretary services
 - informs on the process, invites stakeholders
 - acquires resources
 - administers the process

Planned to be developed within 1 – 6/2009

Work input 5 months expert services

2 months secretary services

Cost estimates EUR 89 000

6. Proposed SPM scheme development plan

Schedule

1. **Global strategy for sustainable peatland management**
2. **Scheme administration - proposal for an administrative structure**
3. **Standard setting**
4. **Chain of custody verification**
5. **Certification and accreditation arrangements**

6.2. Scheme administration

■ Purpose

- develop professional, cost-efficient, reliable and transparent SPM scheme administration that can
 - further develop and promote it
 - ensure its reliable and impartial implementation and
 - negotiate internationally to ensure scheme's recognition
 - ensure a fair consideration of all interests in scheme development and implementation
 - collect and administer finances for development and implementation
- benefit from synergies with IPS without interfering to the current IPS operations

6.2. Development of scheme administration

■ Options to consider

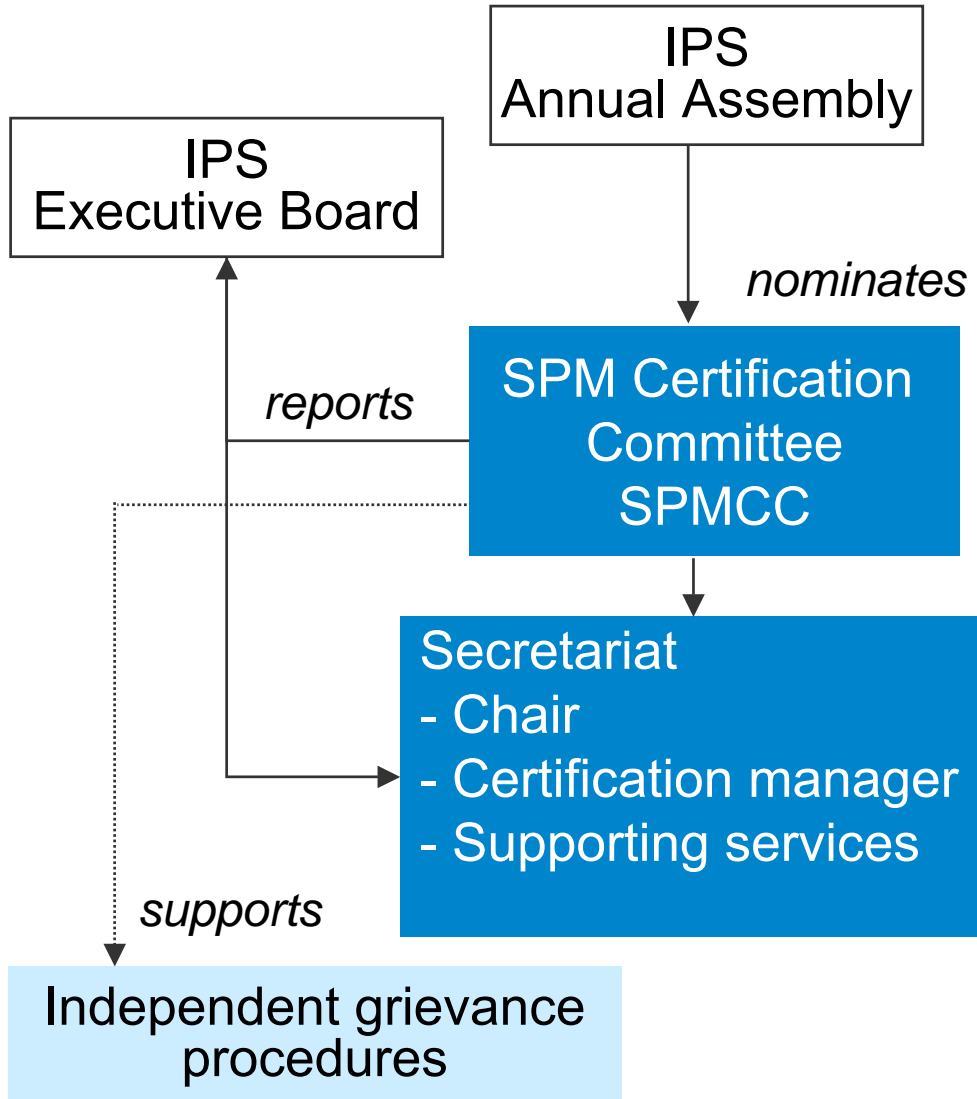

- a) Scheme is financially and administratively independent from IPS
- b) Semi-independent organization partly supported by IPS
- c) Certification committee under IPS organization (cf. IPS Commissions)

 Best synergies with IPS, without the risk for double administration

■ Working method

- Administrative working group invited by IPS drafts the management structures, rules and administrative procedures
 - headed by a chair (IPS member or other)
 - coordinated by IPS nominated certification manager
 - other interested parties (producers, NGOs, ...)
- Administrative structures to be developed in 6 – 11/2009
- Estimated costs EUR 50 000

6.2. Scheme administration

- *SPMCC: Balanced representation of economic, social and environmental interests*
- *Geographical balance to be considered*
- *9 to 15 members*

- *SPMCC – legal body (or under IPS)*
- *Operates from IPS office*
- *Manages the scheme and potential product label*

- *Personnel costs EUR 77 000/a*
- *Total operation costs EUR 214 000/a*

6. Proposed SPM Scheme Development plan

Schedule

- 1. Global strategy for sustainable peatland management**
- 2. Scheme administration - proposal for an administrative structure**
- 3. Standard setting**
- 4. Chain of custody verification**
- 5. Certification and accreditation arrangements**

6.3. Standard setting

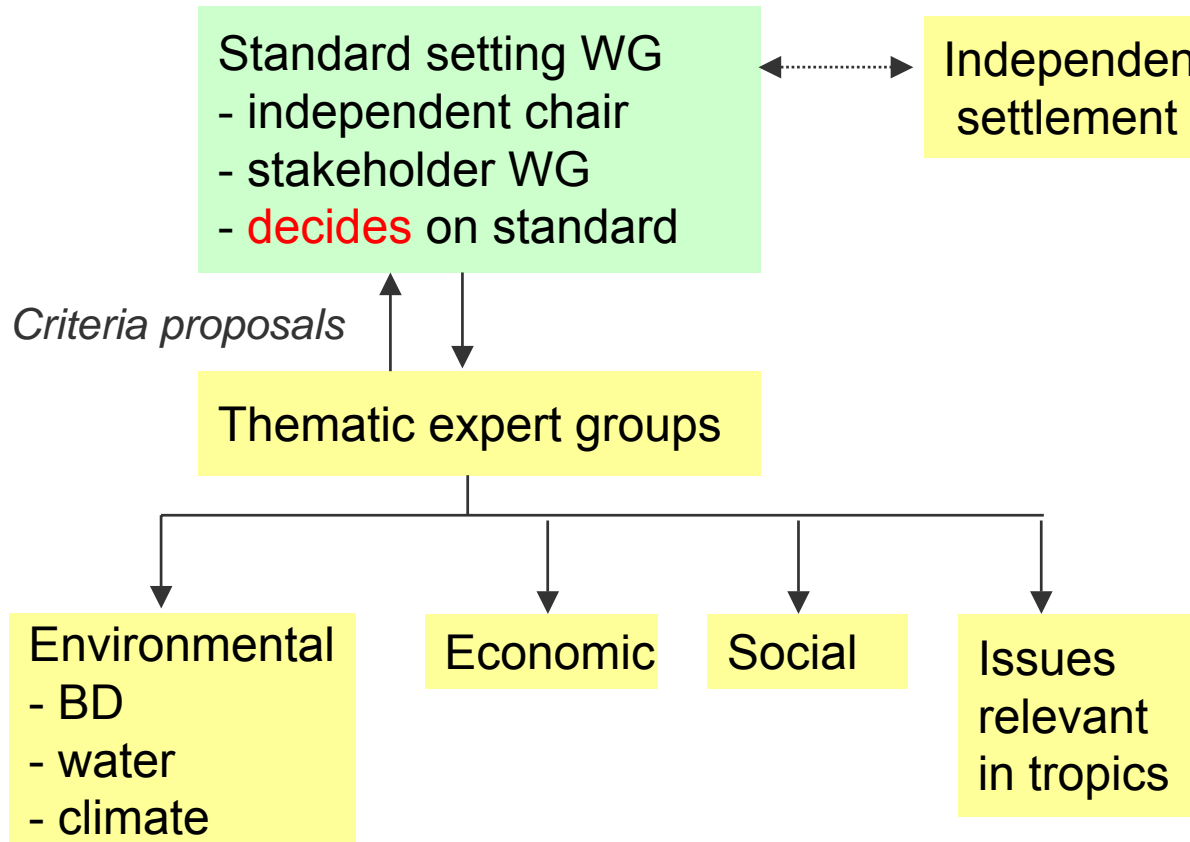

■ Purpose

- expresses the **desired state of art of SPM**
- address all the environmental, social and economic issues relevant for SPM and is **efficient in achieving the desired objectives**

■ Working method

- developed by **standard setting WG** in an open participatory process according to set rules and work plans
- intergrate the expertise of IPS Comissions and other stakeholders
- IPS initiates the process and provides coordinating and secretarial services

6.3. Proposed structure for standard setting

- *Std setting WG (10 pers)*
- *Chair*
- *Heads of thematic WGs*
- *Other stakeholders*
- *IPS provides resources*

- *Planning 2010 –2011*
- *Std setting WG*
- *6 meetings*
- *Cost estimate*
- *EUR 265 000*

6. Proposed SPM Scheme Development plan

Schedule

- 1. Global strategy for sustainable peatland management**
- 2. Scheme administration - proposal for an administrative structure**
- 3. Standard setting**
- 4. Chain of custody verification**
- 5. Certification and accreditation arrangements**

6.4. Certification in the peat supply chain

Certified production

Certified chain of custody

Certified product

Kuva: Pertti Harstela

Verification of supply chain in

- storages
- transport and
- processing

Turveteollisuusliitto

Turveteollisuusliitto

Vapo

Kuva: Pertti Harstela

6.4. Chain of custody

■ Purpose

- mechanism to provide **reliable information on the origin of raw material** in a product

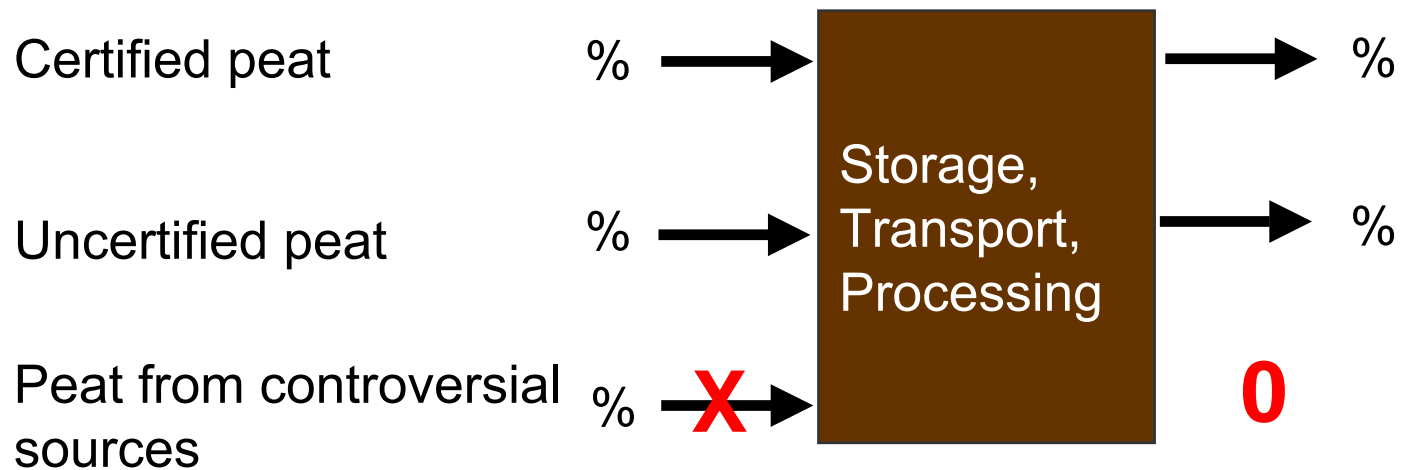

■ Method

- requirements for chain of custody verification presented in a standard
- **generic standards** exists should be **adapted to peatland management** under the SPM scheme

■ Chain of custody system should deliver

1. classification of raw material to certified, uncertified, recycled and exclude all material from controversial sources
2. shares of each category
3. consider climate impact for peat entering into relevant end-use segments – avoid cost implications on other end-use
4. avoid "greenwashing" – e.g. speculations in allocation of sites for carbon trade

6.4. Chain of custody – Example: control of certified peat

6.4. Chain of custody - labelling

Tasks to consider

1. **Adaptation of a generic standard** for supply chain verification to meet the needs of peatland and carbon pool management and peat production for the multiple purposes
 - verification of climate adapted peat production and various systems for carbon trade set their specific requirements
2. **Need for a labelling system?**
 - is information on certification status important only in business-business communication?
 - is a product label required? - SPM label?

6. Proposed SPM Scheme Development plan

Schedule

- 1. Global strategy for sustainable peatland management**
- 2. Scheme administration - proposal for an administrative structure**
- 3. Standard setting**
- 4. Chain of custody verification**
- 5. Certification and accreditation arrangements**

6.5. Certification and accreditation (1/2)

■ Basic assumptions

1. IPS will not be an accreditation body
2. SPM certification relies on **ISO requirements for certification and accreditation**
 - internationally recognized and administered procedures
 - valid in any business
3. Parties involved in SPM scheme development are not involved in certification or accreditation procedures (general rule)
 - IPS (SPMCC) does not have control

6.5. Certification and accreditation (1/2)

4. Only certification bodies that already are in business and **have an accreditation** e.g. to certification against ISO standards are recognized to do SPM certification
 - small new-comers excluded by SPM scheme requirement

5. Forest certification frameworks (FSC, PEFC) do not currently have any procedures for certification of peatland management
 - cooperation possible in future

6.5. Certification and accreditation

■ Purpose

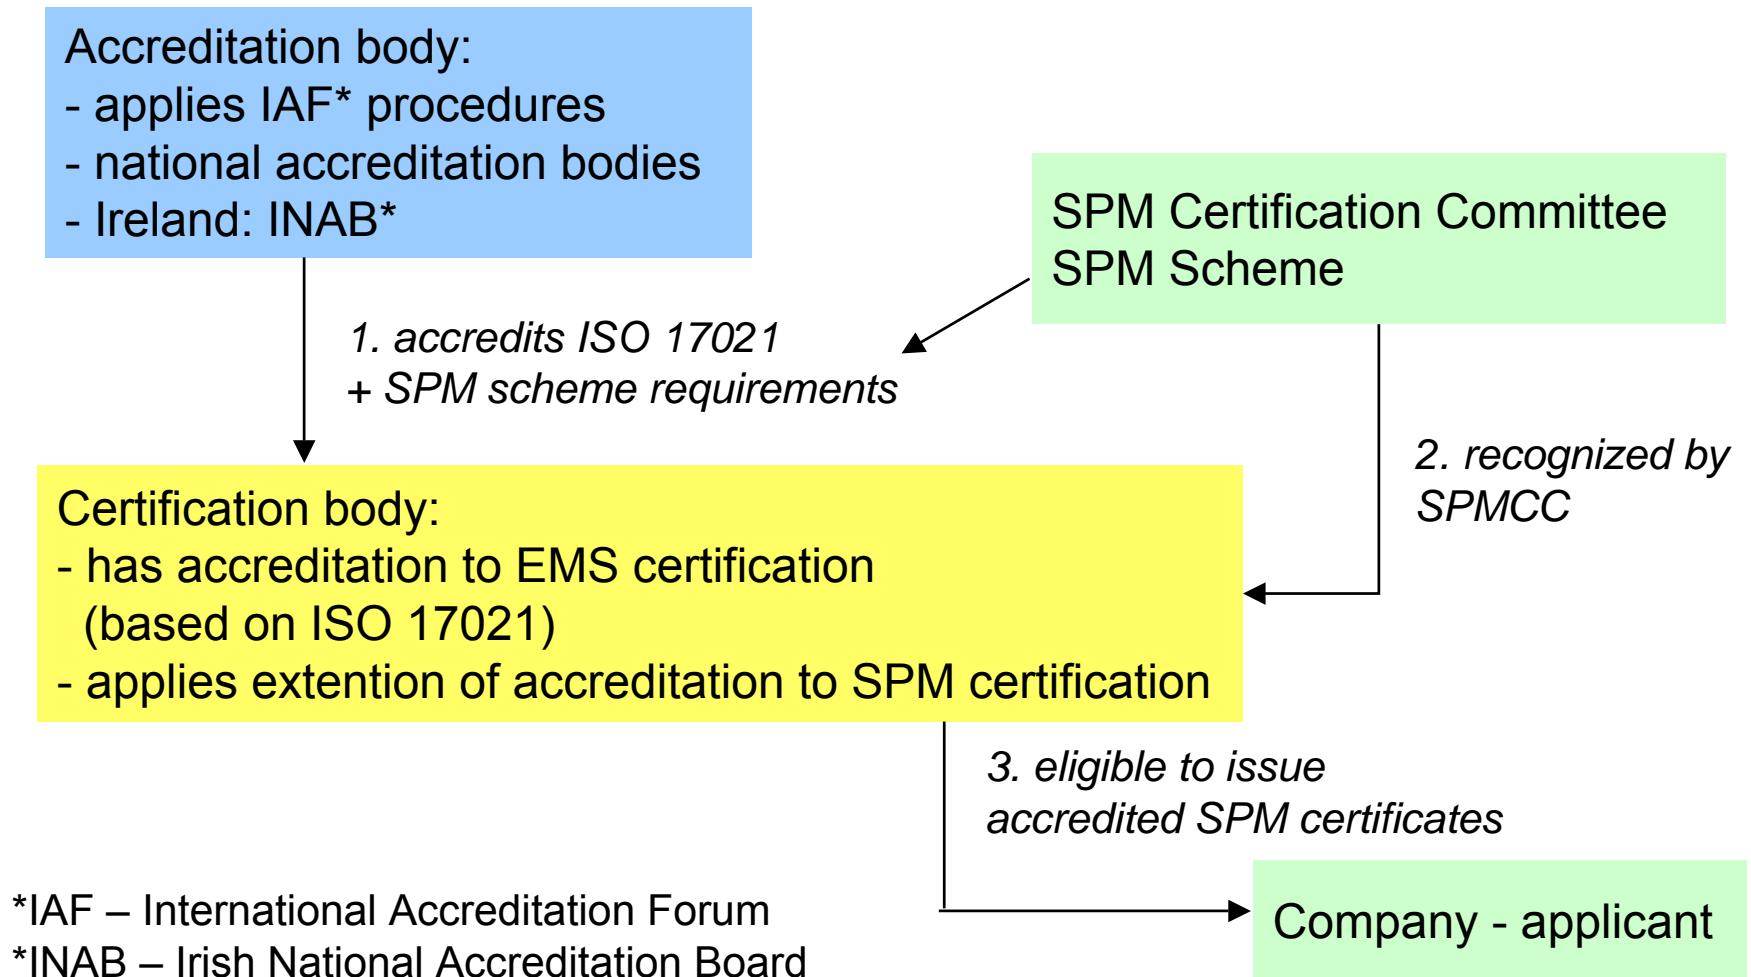

- Accreditation body verifies impartiality, independence and competence of certification bodies and the auditing procedures*
- Certification process meets the international requirements* and specific provisions of the SPM scheme

■ Method

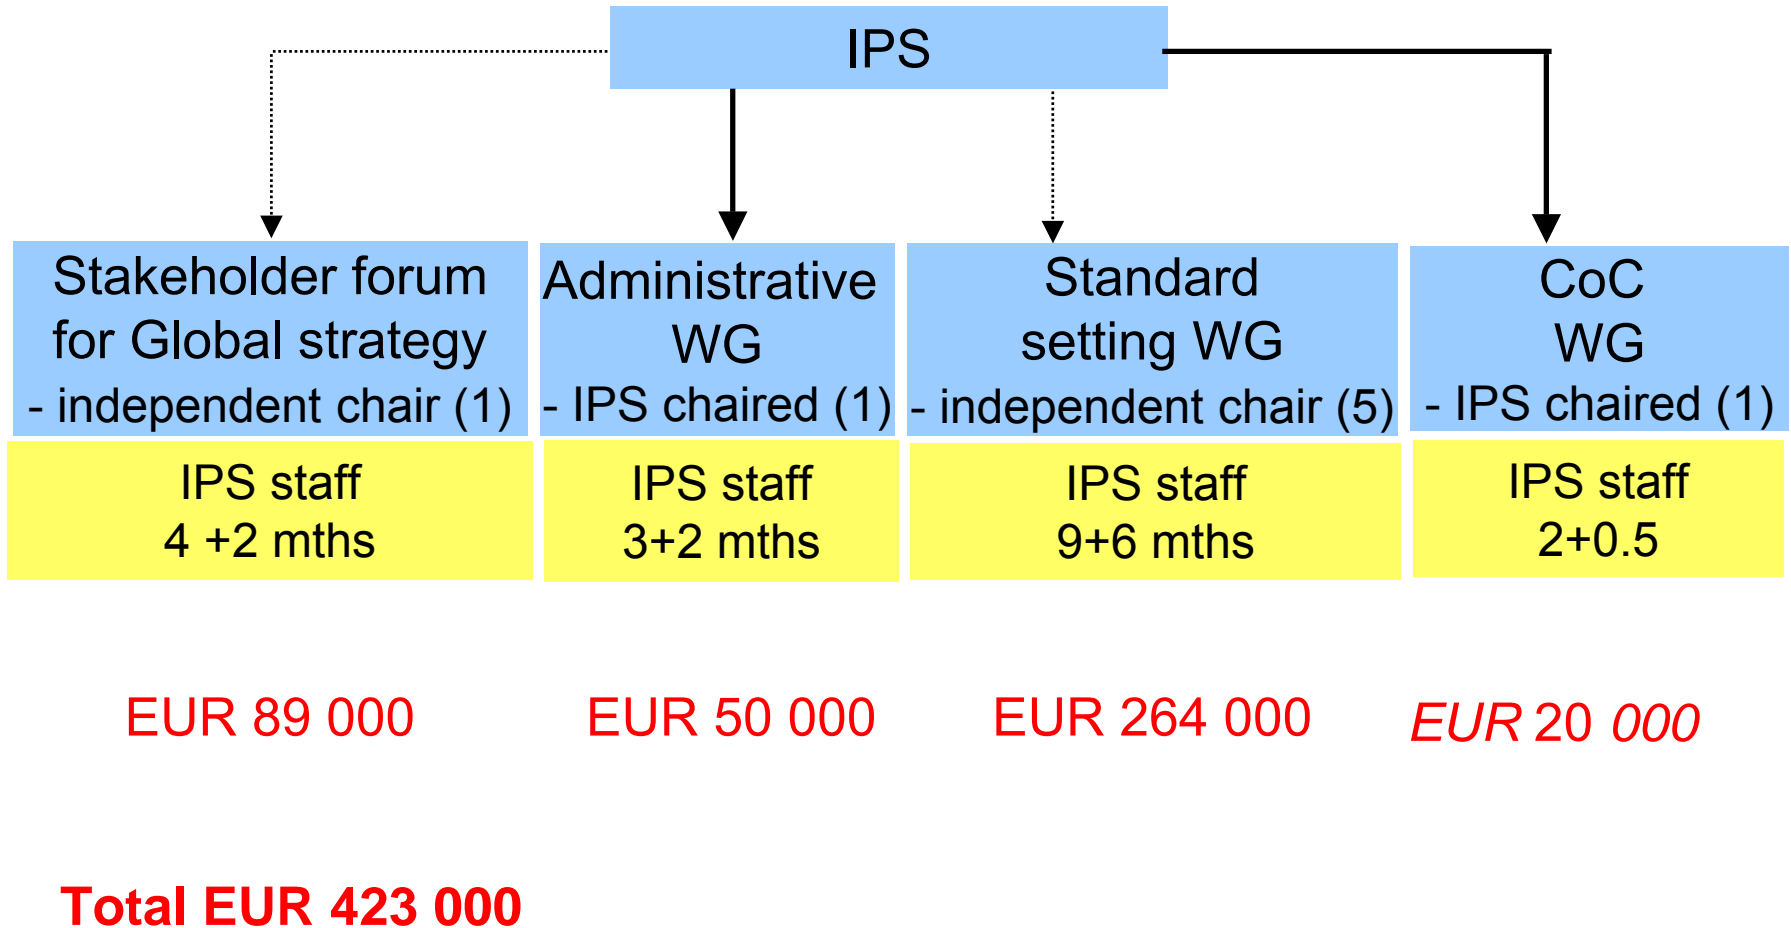

- SPM scheme defines the general provisions for certification bodies it can recognize – refers to specific ISO standards
- SPMCC raises awareness among accreditation and certification bodies on the SPM certification
 - AB and CB must invest in developing procedures for SPM certification

*requirements stated in respective ISO standards

6.5. Proposed organization certification and accreditation

7. Summary on SPM scheme development

7. Annual operational expenses and estimated incomes

Expenses

Personnel costs EUR 77 000

Office costs EUR 12 500

Operation costs EUR 70 000

Development costs EUR 55 000

Total expenses EUR 214 500

Incomes

Royalties* EUR 160 000

Fees on CoC EUR 40 000

Carbon trade (voluntary
markets)** EUR 14 500

Fees on label use later

Total incomes EUR 214 500

**0.5 cent per total peat production (m³) of the companies having a certificate*

*** Expected to increase if soil carbon pool is considered in carbon trade markets*

8. Lessons learned

- ✓ **Common baseline for sustainable use is important** to avoid fundamental conflicts
- ✓ Resources and **procedural expertise** in standard setting important (conflict resolution, win-win approach)
- ✓ **Power sharing** in administration and development among interested parties increase commitment
- ✓ Scheme development and management requires **resources** – merely available in large-scale industry and carbon trade markets
- ✓ Certification requires extensive **promotion**
 - among producers, traders, consumers
- ✓ **Only well known and trusted certification has market value!**

Thank you!
